Additional Homeless Populations Summary for UT-500 - Salt Lake City & County CoC

Date of PIT Count: 1/26/2022
Population: Sheltered and Unsheltered Count

Other Homeless Subpopulations

	Sheltered			Unsheltered	Total
	Emergency	Transitional	Safe Haven		
Adults with a Serious Mental Illness	546	36	0	88	**670**
Adults with a Substance Use Disorder	317	12	0	68	**397**
Adults with HIV/AIDS	28	1	0	4	**33**
Adult Survivors of Domestic Violence	124	42	0	29	**195**

Methodology for UT-500 - Salt Lake City & County CoC

Sheltered Population Total

1. What data source(s) was used to produce the total number of people included in the sheltered population (staying in an emergency shelter, Safe Haven, or transitional housing) on the night of the count? Please indicate the percentage of the PIT count derived from each of the sources. (If a source was not used, please enter zero).

HMIS Data	**80%**
Provider-level surveys	**13%**
Client-level surveys	**7%**
Observation	**0%**
Other	**0%**
Total	**100%**

2. Was the CoC able to collect information about the number of people being sheltered on the night of the count from all emergency shelters, Safe Havens, and transitional housing projects listed on the HIC or only some? listed on your HIC or only some?

- Complete census count

3. What information or method(s) was used to de-duplicate the count of the total number of people included in the sheltered population?

- Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number

- Comparison of unique client identifiers (not PII)

- Blitz count of persons in shelters (i.e., count occurred at same time to avoid double counting)

- Interview/survey question(s) with screening questions (e.g., have you already completed a count survey)

Sheltered Subpopulation

4. What data source(s) was used to produce the demographic and subpopulation data included in the sheltered population (staying in an emergency shelter, Safe Haven, or transitional housing) on the night of the count? (select all that were used)

- HMIS Data

- Provider-level surveys

- Client-level surveys

5. Was the CoC able to collect information about the demographic and subpopulation characteristics of all sheltered people or only some?

- A subset of sheltered people

5a. How did the CoC select the subset of people?

- Sheltered people were were not selected randomly, and the selection was driven by convenience or expediency (e.g., people that were willing to provide information)

5b. Did the CoC adjust the information in some way (e.g., statistical adjustment or extrapolation) to account for all sheltered people?

Yes

6. Looking at the change in your sheltered count from last year's count, please choose up to three reasons that best explains these changes from the drop down list below.

- Change in emergency shelter capacity

- Change in transitional housing capacity

Please provide a brief description of these specific factors (500 word limit):

Our sheltered count was conducted in the same way that it has been in previous years. Data was collected from both agencies that participate in HMIS and non-participating agencies.

Our count of sheltered persons in Emergency Shelter was 59 more than in 2021. Even with COVID-19 shelter decompression, our non-congregate shelter and overflow capacity increased. Some of this was due to additional funding related to COVID-19 for vouchers and the use of non-congregate hotel to mitigate the spread of COVID-19 and protect vulnerable populations.

We had an increase of 64 persons served in beds categorized as Transitional Housing. This is in part due to shifting inventory usage returning to pre-pandemic capacity levels and an additional GPD project of 10 beds being brought online.

Unsheltered Population

7. What approach(es) was used to count the total number of people included in the unsheltered population during the PIT count. (select all that were used)

  - "Night of the count" - known locations

  7a. Were certain areas within the CoC geography specifically excluded because the CoC had reason to believe there were no unsheltered people in those areas?

  Yes

  7b. How did the CoC select the areas that were included for canvassing?

  - Areas were not selected randomly, but an effort was made to use local knowledge to target known locations (e.g., areas with known concentrations of unsheltered homeless people)

  7b1. Did the CoC adjust the information in some way (e.g., statistical adjustment or extrapolation) to account for areas within the CoC geography that were not canvassed but where unsheltered people might have been on the night of the PIT count?

  No

  7c. In areas that were canvassed, did the CoC count all unsheltered people in those areas or a sample of people?

  - All people encountered during the count

8. What information or method(s) was used to de-duplicate the total count of people in the unsheltered population? (Check all that apply)

- Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number

- Comparison of unique client identifiers (not PII)

- Blitz count of unsheltered people (i.e., canvassing of different areas occurred at same time to avoid double counting)

- Interview/survey question(s) with screening questions (e.g., have you already completed a count survey)

Unsheltered Subpopulations

9. What approach(es) was used to collect demographic and subpopulation data about unsheltered people included in the unsheltered population during the PIT count?

- Surveys/interviews of people identified as unsheltered on the night of the PIT count

- Surveys/interviews of people identified as unsheltered on the night of the count, but completed at a later date

- Surveys/interviews of people identified within 7 days following the night of the PIT count night who may have been unsheltered on the night of the PIT count (e.g., "service-based" surveys at locations where people who are homeless go for assistance)

10. Were all people who were encountered during canvassing on the night of the count or during post night of the count PIT activities asked to complete a survey/interview?

- All people encountered were surveyed

11. What information or method(s) was used to produce an unduplicated total count of homeless people across your sheltered and unsheltered populations?

- Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number

- Comparison of unique client identifiers (not PII)

- Blitz count of unsheltered people (i.e., sheltered and unsheltered counts occurred at same time to avoid double counting)

- Interview/survey question(s) with screening questions (e.g., have you already completed a count survey)

12. Looking at the change in your unsheltered count from last year's count, please choose up to three reasons that best explains these changes from the drop down list below

- Change in PIT count methodology

- Increased or improved PIT count training

- More volunteers for PIT count

Please provide a brief description of these specific factors (500 word limit):

Our 2021 Count implemented strong COVID-19 precautions and was conducted as an observation only count with fewer volunteers, limited geographic coverage. 2021 was also the first year we used sampling and extrapolation which we believe led to an inflated count.

Our 2022 count of 281 is only 13 more than our pre-pandemic 2020 count and is a better reflection of our current unsheltered numbers.

Continuing our efforts from previous years, our community utilized a comprehensive Point in Time Task Group to plan and implement the PIT 2022 count. Members of the task group included representatives from the Salt Lake County Collaborative Applicant team, HMIS lead, CoC board members, local city and county government, service providers, advocates, and law enforcement. The result was an inclusive and strategic planning effort. This included a robust training plan including a general PIT training and a technical training for the app use, but also covered information about youth homelessness, trauma informed approaches, valuing cultural diversity, and insights about unsheltered homelessness along the Jordan River Parkway.

Prior to the Count we utilized drones to focus efforts on specific remote areas that showed signs of camping. Volunteers from the Jordan River Commission paddled along the Jordan River and used location technology to drop pins on digital maps to indicate river encampments. This ensured that our surveying efforts were informed, efficient, and effective.

Our data collection effort utilized a mobile app, with optional paper surveys. The Esri ArcGIS Survey123 platform was programed by the GIS specialists in the Salt Lake County Surveyor\\'s office in partnership with the HMIS lead and the PIT task group members. Census tracts were used as a layer on the app to help assign volunteers specific geographic areas.

We experienced a great turnout of more than 200 volunteers to help throughout the three days of the Point in Time Count, and the increase in volunteers and the comprehensive planning strategy allowed us to better cover territory throughout Salt Lake County.
